Internationale Gesellschaft für Elektromog-Forschung IGEF Ltd
International Association for Electrosmog-Research IGEF Ltd

CERTIFICATE

The measurements for determining the shielding effectiveness against electromagnetic waves in the frequency range 10 MHz to 4 GHz showed that the

Roof and Facade System made of Titanium Zinc

produced by RHEINZINK GmbH & Co. KG attenuate the external high-frequency radiation by more than 105 dB. This means a reduction of 99.99999999%. Directly behind the material only 0.00000001% of the external radiation could be determined.
